Now, it seems that the infamous Friendster is turning into the kind MySpace is famous for.

You are now capable and granted the permission to add your own HTML (hypertext markup language) codes and also to some extend use your own CSS (Cascading style sheet) codes. You may now use this codes to alter your profiles' appearance, adding some videoclips, songs, flash games and others.

Cutting the crap, what i want to share with you all here is some html and css codes that i use in my Friendster profile - fuQaha- , email elffuhrer122@netscape.net. For the codes, you may copy, alter, or do whatever you like with it, but i truly appreciate it if you guys leave <p>the song is streamed directly from www.mc0004.com</p> remain unchanged (just for the credits and the promotion of our Official webpage).

To use the codes, login to your Friendster account (for surelah) > Edit Profile > Customize .. In the first box (add music and video to your profile) simply copy and paste the code below.

```
<center><div id="mplayer" style="margin:0;padding:0">
<object name="Player" width="450" height="350"
classid="CLSID:6BF52A52-394A-11d3-B153-00C04F79FAA6" standby="Loading Microsoft Windows Media Player
components..." type="application/x-oleobject">
  <param id="piURL" name="URL"
value="http://www.mc0004.com/mp3/thesongyouchoose.mp3"></param>
  <param name="AutoStart" value="True">
  <param name="uiMode" value="mini">
  <param name="enableContextMenu" value="false">
</object></center>
<p><center>write anything here</p></center>
<p><center>write anything here</p></center>
<p>the song is streamed directly from www.mc0004.com</p>
```

Okay, now you have done copying the codes, now its your turn to choose the song you like. To get a preview of the song, use the mc0004 Music Player. In the above code, notice "http://www.mc0004.com/mp3/thesongyouchoose.mp3". Below is the song list, copy it (together with the artist) and replace thesongyouchoose.mp3 with it. For instance you choose the song Bayangkanlah by Padi, copy Padi - Bayangkanlah.mp3 and replace thesongyouchoose.mp3 with it. the script turn out to be "http://www.mc0004.com/mp3/Padi - Bayangkanlah.mp3". Faham tak ?

And now done with the song, we are now to change the profiles' background.

At the seond box of the Edit Profile > Customize (the one labeled Advanced users), copy and paste this CSS script.

```

<style type="text/css">
body {
background-color:black;
background-image:
url("http://royalbuttfingers.malscene.net/wallpaper/ugly_013_1.JPG");
background-attachment: fixed;
}
</style>

```

To change to background with the picture you prefer, simply search for the picture via Google > Image . Get the url, and replace

url(http://royalbuttfingers.malscene.net/wallpaper/ugly_013_1.JPG);

with the url of the picture. Okay, thats all i can share. For more information on CSS styling, visit http://www.cubancouncil.com/friendster/index_adv.html ..
